

Jinhong Kuang

Computer Vision / ML Engineering

982540204@qq.com | Qujing, China - Open to relocation | Target availability: summer 2027

Master's student researching solar image denoising, transitioning from computing education into engineering. Uses Python to turn research inference, input contracts and result verification into runnable projects.

EDUCATION

Kunming University of Science and Technology

Sep 2024 - Jun 2027 expected

Master's in Computer Technology, in progress. Part-time via national unified admission. Research: computer vision and solar image denoising.

Guangdong Ocean University

Sep 2016 - Jun 2020

B.Eng. in Software Engineering, full-time.

RESEARCH & ENGINEERING PROJECTS

Solar denoising and signal-response evaluation

Ongoing master's research

Maintains experiment evidence across three input configurations and three seeds, each trained for 6,000 steps. Adapts a fixed third-party SHINE checkpoint for CPU inference with mask, unit and hash checks; exports 64x64 scientific arrays and comparable previews. The narrow-probe study did not establish an advantage over the Gaussian control.

Vision inference and asynchronous task service

Personal prototype

FastAPI/SQLite service with validated uploads, persistent task states, bearer-scoped results, idempotent submission, explicit retry and downloads. Separate Gaussian and registered-solar neural routes. Twelve service tests pass; real model outputs match direct inference elementwise. Fresh local-environment migration verified.

Documentation and experiment assistant

Personal prototype

Bilingual lexical retrieval with versioned source citations and read-only task queries. Optional model adapter uses atomic cost reservations, request deduplication and conservative failure accounting. Nineteen tests pass. Source retrieval works; live external-model acceptance is pending account setup.

EXPERIENCE

Yunnan Industrial Technician College - Computing Instructor

Jun 2021 - Present

Teach databases, data structures, operating systems and computer networks, with Python and RHEL 8 teaching practice. Recognized as an Outstanding Teacher by the college in 2026.

SKILLS & CERTIFICATIONS

Python; PyTorch, NumPy/SciPy; FastAPI, SQLite; Linux

Python is the strongest language; other tools are used in these research and engineering projects. CET-4; Software Designer (intermediate national qualification); Assistant Lecturer title.

Projects use AI-assisted development and verification. SHINE is credited as third-party architecture. Personal prototypes are not commercial employment.
